

# DEARBORN ROAD MAINTAINER

*Keeps Roads Up..Costs Down*

**DEARBORN HEAVY-DUTY LOADER  
WITH HYDRAULIC BUCKET CONTROL**

The third cylinder of this versatile Dearborn Heavy-Duty Loader enables the operator to control the angle of the material bucket at all times . . . in any position.

**DEARBORN ANGLE DOZER  
HAS ADJUSTABLE ANGLE AND PITCH**

Cutting width of the Dearborn Angle Dozer is 6 ft. with blade not angled, 5 ft. when angled. Ford Tractor Hydraulic Touch Control lifts or lowers the blade.

It can give "washboardy" road surfaces a "shave," to make motor traffic smooth, safe, comfortable. It can clean and reshape ditches, trim berms, blade surfacing materials on repair or construction.

The new Dearborn Road Maintainer can do all of these things because it's built like a motor grader. Long wheel base for effective blading. Strong frame to give firm circle support. Weight concentrated on the drive wheels for traction. These are features of big, high-priced motor graders! Yet the Dearborn Road Maintainer costs less to own and to operate than any comparable maintainer offered today.

This versatile Maintainer is Ford Tractor powered. Full range vertical blade positioning is under responsive hydraulic control powered by a separate pump. Accessory equipment is controlled by the Ford Tractor's hydraulic mechanism.

For complete information write Dept. I, Dearborn Motors Corporation, or get in touch with your nearby Ford Tractor dealer.
