

CONTENTS

1 SUMMARY

PART I

2 CHAPTER ONE What Skid Resistance Is

Definitions: Skid Resistance and Friction Force
Skid Resistance and the Driving Task
The Wet Pavement
State of the Art

5 CHAPTER TWO Skid Resistance Requirements

Skid Resistance Demands of Traffic
Accident Frequency and Skid Resistance
Driver Behavior and Frictional Needs of Traffic
Vehicle Design Factors and Frictional Needs of Traffic
Frictional Needs of Traffic and Highway Geometrics
Definition of Minimum Skid Resistance Requirements
Future Developments
Spot Improvement
Slipiness and Hydroplaning
Cost-Effectiveness of Skid Resistance Control
Variations of Skid Resistance
Legal Aspects of Skid Resistance

13 CHAPTER THREE Methods of Skid Resistance Measurement

Locked-Wheel Trailer Methods
Automobile Methods
Portable Field Testers
Laboratory Testers
Methods Employing Tires in Other Than the Locked-Wheel Mode
Correlation Between Testers

25 CHAPTER FOUR Characteristics of Skid-Resistant Surfaces

Texture
Microtexture
General Surface Properties
Grooving and Porous Layers

31 CHAPTER FIVE Deterioration of Skid Resistance

Wear and the Loss of Skid Resistance
Polishing
Bleeding of Asphaltic Pavements
Compaction, Rutting, Particle Loss
Studded Tires
Contamination
Roughness
Cyclic Effects
Runoff Changes

38	CHAPTER SIX Design and Construction of Skid-Resistant Surfaces
	Design of Pavement Surfaces
	Surface Aggregates
	Aggregate Characteristics
	Pavement Mixtures
	Bituminous Concrete Pavements
	Portland Cement Concrete Pavements
49	CHAPTER SEVEN Maintenance of Pavement Skid Resistance
	Pavement Surface Inventory
	Modification of Existing Surface
	Application of a New Surface
	Other Corrective Measures
	Summary
54	CHAPTER EIGHT Skid Resistance Control Principles
	Measurement
	Comparison with Requirements and Standards
	Estimates of Deterioration
	Choices of Action to Be Taken
57	CHAPTER NINE Skid Resistance Surveys
	Mandates
	Survey Objectives and Scope
	Survey Methods and Procedures
	Data Acquisition
	Data Evaluation
61	CHAPTER TEN Lowering Skid Resistance Requirements
	Speed Restrictions and Warning Signs
	Education and Enforcement
	Smoothing Traffic Flow
	Removal of Hazards
	Preventing Water Accumulation
62	REFERENCES
	PART II
66	APPENDIX A Summary of an Updated Inventory of Existing Practices and Solutions to Slippery Pavements, 1971

ACKNOWLEDGMENTS

This synthesis was completed by the Highway Research Board under the supervision of Paul E. Irick, Assistant Director for Special Projects. The Principal Investigators responsible for conduct of the synthesis were Thomas L. Copas and Herbert A. Pennock, Special Projects Engineers.

Special appreciation is expressed to W. E. Meyer, Professor of Mechanical Engineering, The Pennsylvania State University, and William A. Goodwin, Dean for Research, The Graduate School, The University of Tennessee, who, as special consultants to the Advisory Panel, were responsible for the collection of data and the preparation of the report.

Valuable assistance in the preparation of this synthesis was provided by the Topic Advisory Panel, consisting of R. Clarke Bennett, Chief, Technical Development and Standards Division, Office of Highway Safety, Federal Highway Administration; William Gartner, Jr., Deputy State Highway Engineer (Operations), Florida Department of Transportation; David C. Ma-

hone, Highway Research Analyst, Virginia Council of Highway Investigation and Research; Rolands L. Rizenbergs, Research Engineer Chief, Division of Research, Kentucky Department of Highways; Richard K. Shaffer, Research Coordinator, Pennsylvania Department of Transportation; George Sherman, Assistant Materials and Research Engineer (Pavement), Materials and Research Department, California Division of Highways; and William P. Walker, Chief, Geometric Standards Branch, Highway Design Division, Office of Engineering, Federal Highway Administration.

H. A. Smith, Projects Engineer, and L. F. Spaine, Engineer of Design, both of the Highway Research Board, assisted the Special Projects staff and the Advisory Panel.

Information on current practice was provided by many highway agencies. Their cooperation and assistance were most helpful.
