|-------------------------------------------------------|-----|
| PREFACE                                               | vii |
| CHAPTER 1. INTRODUCTION                               | 1   |
| 1.1 The freezing of pure water                        | 1   |
| 1.2 Effect of impurities                              | 3   |
| 1.3 Circulation                                       | 4   |
| 1.4 The occurrence and classification of ice          | 6   |
| 1.5 Importance of ice                                 | 9   |
| 1.6 Special types of high-pressure ice                | 10  |
| CHAPTER 2. SEA ICE                                    | 11  |
| 2.1 The composition of sea water                      | 11  |
| 2.2 The freezing of sea water                         | 12  |
| 2.3 The optical properties of ice                     | 16  |
| 2.4 The structure of sea ice                          | 20  |
| 2.5 Polar ice                                         | 28  |
| 2.6 The structure of fresh-water ice                  | 29  |
| CHAPTER 3. ICE DRIFT                                  | 31  |
| 3.1 Arctic pack ice                                   | 32  |
| 3.2 Antarctic pack ice                                | 43  |
| 3.3 Icebergs                                          | 45  |
| CHAPTER 4. ICE CONTROL                                | 47  |
| 4.1 Chemical melting and the use of heat              | 47  |
| 4.2 Icebreakers                                       | 52  |
| 4.3 Air bubbling                                      | 58  |
| 4.4 Explosives                                        | 61  |
| CHAPTER 5. THE CRYSTALLOGRAPHY OF ICE                 | 62  |
| 5.1 The structure of water vapour and liquid water    | 63  |
| 5.2 Diffraction of X-ray, neutron, and electron beams | 69  |
| 5.3 The structure of ice                              | 73  |
| 5.4 The positions of the hydrogen atoms               | 81  |
| 5.5 The density of ice and water                      | 84  |
| CHAPTER 6. THE MECHANICAL PROPERTIES OF ICE           | 86  |
| 6.1 The rheological nature of ice                     | 87  |
| 6.2 The ultimate strengths of fresh-water ice         | 95  |
| 6.3 A theory of sea ice                               | 99  |

|                                                            |                                              |     |
|------------------------------------------------------------|----------------------------------------------|-----|
| 6.4                                                        | The ultimate strengths of sea ice            | 103 |
| 6.5                                                        | The elastic parameters of ice                | 107 |
| 6.6                                                        | Friction                                     | 109 |
| 6.7                                                        | Density                                      | 113 |
| CHAPTER 7. THE THERMAL AND ELECTRICAL PROPERTIES<br>OF ICE |                                              | 116 |
| 7.1                                                        | The thermal properties of fresh-water ice    | 116 |
| 7.2                                                        | The thermal properties of sea ice            | 120 |
| 7.3                                                        | The electrical properties of fresh-water ice | 129 |
| 7.4                                                        | The electrical properties of sea ice         | 131 |
| CHAPTER 8. THE GROWTH AND DECAY OF AN ICE<br>COVER         |                                              | 133 |
| 8.1                                                        | Stefan's law and the diffusion equation      | 133 |
| 8.2                                                        | The heat budget before and after freeze-up   | 140 |
| 8.3                                                        | The decay of an ice cover                    | 142 |
| BIBLIOGRAPHY                                               |                                              | 145 |
| INDEX                                                      |                                              | 149 |
